Activates your Knowledge

AgroSoft has over 23 years experience in the development of their swine management software WinPig.

The program has been developed and is continually updated by a team of in house programmers who understand the day-to-day priorities of a modern pig business. For new users, WinPig is extremely flexible. It can be set-up within a few minutes. The AgroSoft team will also help transfer your existing herd data into WinPig.

The WinPig program operates on an individual personal computer or a network server. It is a modular program incorporating the consolidation of multiple site production, breeding records, and feeding information.

AgroSoft WinPig is supported by a global team of pig professionals located in 18 different countries, all of whom have had extensive experience in the industry.

The AgroSoft Global support team is giving support in english or the local language including russian, german and spanish.

Free telephone and internet support is included in the AgroSoft Agreement to ensure prompt feedback from customers and continuous improvement of the program.
